Basic Geometry

Q1- Fill in the blanks.

1) The shortest path between two points is called a _____.

2) A _____ has only one end point.

3) A line has no _____ points.

4) The shape which do not begin and end at the same point are called _____ shapes.

5) The shape which begin and end at the same point are called _____ shapes.

6) Polygon made up of more than _____ line segments.

7) The line segments that form a polygon are called the _____ of the polygon.

8) The intersection of two sides is called a _____ of the polygon.

9) The name of a shape with five sides is called _____.

10) The name of a shape with six sides is called _____.

11) A triangle have _____ vertices.

12) A quadrilateral is a polygon formed by _____ line segments.

13) A shape with four sides, where the opposite sides are equal and parallel is called a _____.

14) A special rectangle whose all four sides are of equal length and having four right angles is called _____.

15) _____ is the longest chord of a circle.

16) The distance from the centre to the end point of circle is _____.

Basic Geometry-Answer

Q1- Fill in the blanks.

1) The shortest path between two points is called a line .

2) A ray has only one end point.

3) A line has no end points.

4) The shape which do not begin and end at the same point are called open shapes.

5) The shape which begin and end at the same point are called closed shapes.

6) Polygon made up of more than three line segments.

7) The line segments that form a polygon are called the sides of the polygon.

8) The intersection of two sides is called a vertex of the polygon.

9) The name of a shape with five sides is called pentagon.

10) The name of a shape with six sides is called hexagon.

11) A triangle have three vertices.

12) A quadrilateral is a polygon formed by four line segments.

13) A shape with four sides, where the opposite sides are equal and parallel is called a parallelogram.

14) A special rectangle whose all four sides are of equal length and having four right angles is called square.

15) Diameter is the longest chord of a circle.

16) The distance from the centre to the end point of circle is radius.
